The Slovak Investment and Trade Development Agency (SARIO) in cooperation with InoBat cordially invites you to our Expert Forum on the topic of: „Europe's in-house EV battery solution developed and made in Slovakia“.

The shift towards alternative propulsion systems is disrupting both carmakers & suppliers and is forcing them to transform their businesses. The EU has a strong automotive industry, but a lacking EV supply chain to support these current trends. It is mostly innovative global players from the “Far East” that are trying to fill this EV battery gap- by setting up modern, large-scale manufacturing facilities, but usually keeping Intellectual property related ownership in their home countries. Our session aims to introduce one of the solutions to this situation- InoBat, a European EV battery brand developed and made in Slovakia, the country with the largest per-capita car production in the world, which lies in the heart of the CE automotive industry.

Speakers:

- **German Association of the Automotive Industry (VDA)** - Bernard Mattes, President
- **Ministry of Economy of the Slovak Republic** - Peter Žiga, Minister of Economy
- **Slovak Investment and Trade Development Agency (SARIO)** – Robert Šimončíč, CEO
- **InoBat** – Marián Boček, CEO
- **Volkswagen AG** - Stefan Schmerbeck, Global Government Affairs, Future Technologies
